

Three roles:

USER - the couple / family planning a wedding  
VENDOR - a service provider (venue, photographer, decorator, caterer...)  
ADMIN - the platform team that controls and monitors everything

## BIG PICTURE

---

## 1. USER - what a user can do

---

### 1.1 Account

- Sign up with name, email, phone, password, city and wedding date.
- Verify email with an OTP (and phone with an OTP).
- Log in, reset a forgotten password via an email link.
- Edit profile, wedding details, preferences, social links, profile photo.
- Change password, export their data, delete the account.

### 1.2 Discover vendors

- Browse vendors by category, sub-category and city.
- Search, and filter by price, rating, experience and date availability.
- See featured, trending and recommended vendors.
- Open a vendor's profile: services, portfolio, pricing, reviews.
- Check whether a vendor is free on their wedding date.
- Save vendors to Favorites.

### 1.3 Book a vendor (main flow, see section 4)

- Send an inquiry to a specific vendor, or to a category and let the platform pick a vendor.
- Chat with the vendor: text, images, documents, voice.
- Receive quotations, view them and download the PDF.
- Accept or reject a quotation.
- Pay the advance and later the balance online (Razorpay).
- Track bookings and payments, download receipts.
- Cancel a booking (paid amount is marked as refunded).
- Review the vendor after the booking.
- Raise a complaint against a vendor.
- Report abusive chat messages.

### 1.4 Plan the wedding (personal tools)

- Budget: set a total budget split by category. It updates itself when a quote is accepted and when payments are made.
- Checklist: ready-made wedding tasks; tick them off, add their own.
- Guest list: add guests with side (bride/groom), category, meal preference and RSVP status.
- Timeline: plan wedding events and dates.
- Inspiration: save ideas and browse the inspiration gallery.
- E-Invites: design a digital invitation, publish it, share the link. Guests open it without logging in and RSVP; their response updates the guest list automatically.
- Dashboard and calendar: one view of tasks, guests, events, bookings, quotes and notifications.
- Weather forecast for the wedding date and city.
- Astrology: daily horoscope and kundli match-making.

### 1.5 Family groups (plan together)

- Create a family group and invite relatives by link (personal or group link).
- Invitees accept the invite; people joining through the group link wait for the owner's/admin's approval.
- Members can be "admin" or "member"; the owner can revoke or remove.
- The owner chooses what to share: checklist, timeline, inspiration, budget, guest list (budget and guest list are visible only to the owner and group admins).

- Group chat with private photo/file sharing.

#### 1.6 Notifications

- In-app notifications for quotes, bookings, payments, cancellations, invitations, RSVPs, plus an activity history.

---

## 2. VENDOR - what a vendor can do

---

### 2.1 Join the platform

- Verify phone number with an OTP.
- Register: personal and business details, city, service cities, languages, categories and sub-categories they serve, portfolio, ID proof and GST documents, optional subscription plan.
- Status starts as "Incomplete".

### 2.2 Complete the profile

- Fill a service form for each sub-category they chose (the form fields are designed by the admin).
- Add services with photos/videos and pricing, upload missing documents, add bank / UPI details.
- See their profile completion percentage.
- When complete, submit for approval -> status becomes "Pending".

### 2.3 Get approved and subscribe

- Wait for the admin to approve (Approved / Rejected / Suspended).
- Buy a subscription plan online (Razorpay) -> subscription "Active".
- Only APPROVED + SUBSCRIBED vendors can use leads, quotes, bookings, calendar, reviews, chat and support, and receive auto-assigned leads.
- Approved vendors appear in the public vendor listing.

### 2.4 Run the business

- Leads: see inquiries from users, mark them contacted, add notes, mark important.
- Chat with users, share quotations inside the chat.
- Quotations: create itemised quotes (discount, tax, advance amount, milestone payment terms, terms, cancellation terms), save as draft or send, edit, delete, download PDF.
- Bookings: see bookings created from accepted quotes, add offline bookings manually, move a booking to In Progress -> Completed, or cancel.
- Calendar: block dates when they are not available (users can't book those dates).
- Reviews: read user reviews and reply.
- Inventory: manage items/equipment with photos.
- Support: raise tickets to the admin.
- Notifications, dashboard stats and banners from the admin.
- Settings: change password, notification preferences, deactivate account.

### 2.5 Earnings

- Wallet shows:
  - Pending - money paid by users for bookings not yet completed
  - Available - released after the booking is marked Completed
  - Locked - requested for withdrawal, waiting for the admin
- View transactions and earnings summary.
- Request a withdrawal to bank account or UPI from the available balance.

---

### 3. ADMIN - what the admin can do

---

#### 3.1 Set up the platform

- Categories, sub-categories and the service forms vendors must fill.
- Subscription plans for vendors (price, duration, features).
- Platform settings: commission %, GST %, minimum withdrawal, maintenance mode (shuts the app for everyone except admin).
- Banners for the user app and the vendor dashboard.
- Policies (terms, privacy...), FAQs, support contact details.

#### 3.2 Manage people

- Users: view, block/unblock, delete.
- Vendors: review profiles and documents, approve / reject / suspend, activate/deactivate, mark as featured, delete.
- Vendor services and inventory: review and enable/disable.

#### 3.3 Monitor activity

- Dashboard and analytics: users, vendors, leads, quotes, bookings, revenue.
- View all leads, quotes, bookings and payments on the platform.

#### 3.4 Moderate and support

- Reviews: approve, reject, delete.
- Complaints from users: move through Pending -> In-Review -> Resolved / Dismissed.
- Chat reports: review reported conversations and take action.
- Vendor support tickets: reply and close.

#### 3.5 Money

- Financial summary: total collected, platform commission, refunds, net revenue.
- Full transaction ledger and per-vendor ledger.
- Withdrawal requests from vendors: approve, mark Paid (with bank reference), or reject (money goes back to the vendor's available balance).
- Issue full or partial refunds to users.
- Reconciliation report to spot mismatches.
- Every admin action is recorded in the audit log.

---

## 4. HOW THEY CONNECT - the booking journey step by step

---

- STEP 1 ADMIN prepares  
Admin creates categories and service forms, subscription plans, and sets the commission %.
- STEP 2 VENDOR joins  
Vendor registers -> completes profile -> requests approval.  
ADMIN approves the vendor.  
Vendor buys a subscription.  
-> Vendor is now visible to users.
- STEP 3 USER finds a vendor  
User browses / searches vendors and checks availability.
- STEP 4 USER sends an inquiry (lead)  
Two ways:  
a) Direct - user picks a vendor; the lead goes to that vendor.  
b) Category - user picks only a category; the platform assigns the next vendor in turn (round-robin) among approved, subscribed vendors of that category. Some categories (LED walls, live streaming, flower decor, special entry) are always assigned this way.  
-> VENDOR gets a notification.  
-> A chat between the user and the vendor opens automatically.
- STEP 5 USER and VENDOR talk  
They chat in real time to discuss requirements.
- STEP 6 VENDOR sends a quotation  
Vendor creates a quote with items, discount, tax, advance amount, payment milestones and terms. It can also be shared in the chat.  
-> Lead status becomes "Quote Sent".
- STEP 7 USER decides  
Reject -> quote and lead marked Rejected, vendor notified.  
Accept -> the platform checks:  
- quote not expired  
- vendor still approved, active, subscribed  
- the date is not blocked and not already booked  
then creates a BOOKING (status "Pending"), saves a copy of the quote terms, and fixes the commission at the current rate.  
-> Vendor notified, a message appears in the chat, the user's budget for that category is marked Confirmed.
- STEP 8 USER pays  
User pays the ADVANCE online.  
-> Booking becomes "Confirmed".  
-> Platform keeps its commission; the rest goes to the vendor's wallet as PENDING money.  
-> User's budget "spent" updates. Both sides are notified.  
Later the user pays the BALANCE the same way.
- STEP 9 VENDOR delivers the service

Vendor marks the booking "In Progress", then "Completed".  
-> Vendor's earnings for that booking move from PENDING to AVAILABLE.

#### STEP 10 VENDOR withdraws

Vendor requests a withdrawal (bank / UPI).

-> Amount moves to LOCKED.

ADMIN reviews:

Paid -> admin transfers the money and marks it Paid.

Rejected -> amount returns to AVAILABLE.

#### STEP 11 USER reviews

User rates and reviews the vendor; the vendor's rating updates.

Vendor can reply. Admin can moderate the review.

#### CANCELLATIONS AND REFUNDS

- User or vendor can cancel before the booking is completed.  
Paid amounts are marked refunded and the vendor's earning for that booking is taken back from the wallet. Both sides are notified.
- Admin can also refund a payment fully or partly.
- Refunds are recorded in the system; the actual money is returned manually from the Razorpay dashboard.

#### STATUS SUMMARY

Vendor : Incomplete -> Pending -> Approved (or Rejected / Suspended)  
Lead : New -> Contacted -> Quote Sent -> Booked (or Rejected)  
Quote : Draft -> Sent -> Accepted (or Rejected / Expired)  
Booking : Pending -> Confirmed -> In Progress -> Completed  
(or Cancelled)  
Payment : Pending -> Completed (or Failed / Refunded)  
Withdrawal: Requested -> Approved / Processing -> Paid (or Rejected)

---

## 5. OTHER CONNECTIONS BETWEEN ROLES

---

### USER <-> VENDOR

- Chat (real time, with files and quotes).
- Lead, quote, booking, payment, review, cancellation (above).
- Vendor's blocked dates and existing bookings control what dates a user can book.

### USER -> ADMIN

- Complaints against vendors.
- Chat reports.
- Reviews go to admin for moderation.

### VENDOR -> ADMIN

- Approval request.
- Subscription purchase.
- Support tickets.
- Withdrawal requests.
- Chat reports.

### ADMIN -> USER / VENDOR

- Categories and service forms decide what vendors offer and what users can search.
- Commission % decides how each payment is split.
- Approve/suspend vendors, block users.
- Featured vendors and banners decide what users see first.
- Maintenance mode can pause the whole app.

### USER <-> USER (family and guests)

- Family members plan together in family groups.
- Guests (no login needed) open e-invites and RSVP; responses land in the user's guest list.
